1.2 Product Description

The RoBoard is the heart of any Robotic system making your Robby more active and intelligent. It does not just offer control but is a complete computer system based on the Vortex86DX CPU, a 32bit x86 CPU running at 1000MHz with 256MB RAM.

The RoBoard allows users to install a Windows or Linux Operating System onto a bootable Micro-SD card offering engineers a common storage media to develop with. The RoHS compliant CPU board measures just 96mm x 50mm and accepts a voltage input range from 6V-24V DC whilst providing extremely low power consumption.

RoBoard has the rich I/O interfaces to the servo, DC motors, sensors, gyroscope, accelerometers and other devices.   Also, it has build-in the PWM up to 32 Ch, GPIO,RS-232 serial, TTL serial, RS-485,USB V2.0 x 3, A/D convert, SPI/I^{2}C bus, Audio out & Mic in, 10/100M LAN and Mini PCI socket.

VGA
The Vortex86DX processor also use external Display chip ""Volari™ Z9s" which is an ultra low powered graphics chipset with total power consumption at around 1-1.5 W. It is capable in providing VGA display output up to 1600x1200. With DVO interface, developers could easily connect flat Panel to support TFT and LVDS output.

LAN
The Vortex86DX processor also integrated 10/100Mbps Ethernet controller that supports both 10/100BASE-T and allows direct connection to your 10/100Mbps Ethernet based Local Area Network for full interaction with local servers, wide area networks such as the Internet.

AUDIO
CM119 is a highly integrated single chip USB audio controller specifically for VoIP (Voice over internet protocol) application. All essential analog modules are embedded in CM119, including dual DAC and earphone driver, ADC, microphone booster, PLL, regulator, and USB transceiver.

The RB-100 provides the VGA and LAN drivers for Windows XP, Windows CE 5.0 and Windows Embedded CE 6.0R2 and Windows Embedded Standard (XPe). Please get from official website: http://www.roboard.com
